Glaser’s (1978) steps in the constant comparison method of analysis:

1) Begin collecting data.

2) Look for key issues, recurrent events, or activities in the data that become categories for focus.

3) Collect data that provide many incidents of the categories of focus with an eye to seeing the diversity of the dimensions under the categories.

4) Write about the categories that you are exploring, attempting to describe and account for all the incidents you have in your data while continually searching for new incidents.

5) Work with the data and emerging model to discover basic social processes and relationships.

6) Engage in sampling, coding, and writing as the analysis focuses on the core categories.
